

SUBODH MISHRA

☎ +91-9695259916 ✉ subodhmishra1711@gmail.com 🌐 [GitHub](#) 📍 Mahoba, Uttar Pradesh, India

EDUCATION

Vellore Institute of Technology

B.Tech in Computer Science Engineering with Spec. In AI&ML

Cumulative GPA: 8.86

Expected 2027

TECHNICAL SKILLS

Programming: Java, Python, C++, SQL, HTML, CSS, JavaScript

Frameworks & Libraries: TensorFlow, Scikit-learn, FastAPI, Pydantic, NumPy, Pandas, Matplotlib

Tools: Git, GitHub, Render, Jupyter Notebook, VS Code

EXPERIENCE

AI/ML Intern

MP Online

May 2026 – Jul 2026

Remote

- Designed and trained predictive machine learning models in Python, applying regression and classification algorithms to analyze large-scale datasets and improve efficiency of digital citizen services.
- Applied data preprocessing and exploratory data analysis (EDA) to clean, structure, and optimize complex operational data, improving model training accuracy.
- Leveraged NLP and statistical analysis to extract actionable insights from user interaction data, enhancing platform responsiveness.
- Collaborated cross-functionally following Agile practices to test, validate, and integrate AI-driven solutions within production infrastructure.

PROJECTS

Mental Health Score Predictor

[Live Site](#)

Technologies: Python, FastAPI, Scikit-learn, Pydantic, JavaScript, HTML/CSS, Render

- Architected and deployed an end-to-end Machine Learning web application predicting student mental health scores based on lifestyle habits, screen time, and academic stress metrics.
- Engineered a RESTful API using FastAPI and Pydantic for strict schema validation, real-time model inference, and cross-origin security (CORS).
- Integrated Scikit-learn ML models via joblib serialization to parse complex multi-feature numerical and categorical inputs into instant output predictions.
- Designed an interactive UI with vanilla JavaScript, CSS3, and dynamic SVG gauge animations to render real-time prediction feedback asynchronously.
- Built a decoupled microservice pipeline on Render separating static frontend assets from the Python backend service, establishing automated CI/CD directly from GitHub.

Movie Recommendation System

Technologies: Python, Pandas, Scikit-learn, Streamlit, TMDB API

- Built a content-based recommendation system that suggests similar movies by analyzing genres, cast, and plot summaries using Cosine Similarity.
- Cleaned and processed raw movie metadata using Pandas, combining genre, cast, and plot fields into unified text-based feature vectors.
- Integrated the TMDB API to automatically fetch and display live movie posters and details directly in the user interface.
- Created an interactive web app using Streamlit, allowing users to select a movie and instantly receive top similar-movie recommendations.

CERTIFICATION

- [Applied Machine Learning In Python, Coursera](#)
- [MERN Full Stack Certification Program, Ethnus](#)
- [Artificial Intelligence & Machine Learning, MpOnline](#)

EXTRACURRICULAR ACTIVITIES

- Ensured event discipline as a Discipline Committee member for adVITya'25, supporting smooth fest operations.
- Participated in the college-level Smart India Hackathon (SIH), strengthening problem-solving and teamwork skills.
